Practical 14 Create a page using JavaScript HTML DOM, which contains following fields: Name, Address, Gender, Occupation & submit button. If any field Is left blank, then it should display message.

```
<html>
<head> <title>14.1</title>
        <script type="text/javascript">
                function func()
                {
                        //document.write("Submited Successfully");
                        fl=0;
                        if(document.Form1.Name.value=="")
                                {alert("Error: please Enter Name");}
                        var gen=document.Form1.Gender;
                        flag=0;
                        for(i=0;i<gen.length;i++)
                        {
                                if(gen[i].checked)
                                        flag=1;
                        }
                        if(fl==0)
                                {alert ("Error: please Select Gender");}
                        flag=0;
                        var Occu= document.Form1.Occupation;
                        for(i=0;i<Occu.length;i++)
                        {
                                if(Occu[i].checked)
                                        flag=1;
                        }
                        if(flag==0)
                        {alert("Error: please Select Occupation");}
                }
```

```
	</script>
</head>
<body>
<form name="Form1" onSubmit="func()">
	<fieldset>
	<legend>Enter Name</legend>
		<input type="text" name="Name" size="30"/>
	</fieldset>
	<br>
	<fieldset>
