

**Practical 4** Write a program to find that given number or string is palindrome or not.

```
import java.util.Scanner;

class prac4_1
{
    public static void main(String args[])
    {
        Scanner scan = new Scanner(System.in);
        boolean x = true;
        int len, len1;
        char a, b, temp;
        String s1;
        System.out.println(" Enter String: ");
        s1 = scan.nextLine();
        len = s1.length();
        len1 = len / 2;
        for(int i = 0; i < len1; i++)
        {
            a = s1.charAt(i);
            b = s1.charAt(len - i - 1);
            if(a != b)
                x = false;
        }
        System.out.println(" String is palindrome : " + x);
    }
}
```

```

C:\Java>javac prac4_1.java

C:\Java>java prac4_1
Enter String:
Java
String is palindrome : false

C:\Java>java prac4_1
Enter String:
radar
String is palindrome : true

C:\Java>
```
