Practical 20 Enhance the experiment 4 to store and display the registration details from database.

20.2.html

```html
<html>

<head> </head>

<body>

        <h3>Kaustubh Wade(160410116050)</h3>

        <a href="20.html">Insert Data</a>

        <a href="20.1.html">Retrive Data</a>

</body>

</html>
```

20.html

```html
<html>

<head> </head>

<body>

        <h3>Kaustubh Wade(160410116050)</h3>

<form action="20.php" method="POST">

        Student name : <input type="text" name="sname"/>      </br>

        Student Enrollment Number : <input type="text" name="snum"/>          </br>

        <input type="submit"/>

</form>

</body>

</html>
```

20.php

```php
<?php

        $sname = $_POST["sname"];

        $snum = $_POST["snum"];

        $conn = new mysqli('localhost', 'root', '', 'registration');

        if($conn->connect_error)
```

```php
        die('Connection Error' .$conn->connect_error);

    $sql = "INSERT INTO student(sname, snum) VALUES('$sname', '$snum')";

    $result = $conn->query($sql);

    if($result)

        print("Successfully Inserted!");

    else

        print("Error".$sql."<br>".$conn->error);

    $conn->close();

?>
```

20.1.html

```html
<html>

<head> </head>

<body>

        <h3>Kaustubh Wade(160410116050)</h3>

        <form action="20.1.php" method="POST">

                Enter Enrollment Number : <input type="text" name="snum">

                <input type="submit">

        </form>

</body>

</html>
```

20.1.php

```php
<?php

    $snum = $_POST["snum"];

    $conn = new mysqli('localhost', 'root', '', 'registration');

    if($conn->connect_error)

        die('Connection Error' .$conn->connect_error);

    $sql = "SELECT * FROM student WHERE snum=$snum";

    $result = $conn->query($sql);

    if($result->num_rows > 0)
```

```php
        while($row = $result->fetch_assoc())
        {       echo "Name : ".$row[sname]. "<br>Enrollment Number :
".$row[snum]."<br>";

        }
    else

        echo "0 Results!";

    $conn->close();

?>
```

Successfully Inserted!
