**Practical 11** Create a class called Student. Write a student manager program to manipulate the student information from files by using FileInputStream and FileOutputStream

```java
import java.io.*;
class Student
{
        public static void main(String args[])
        {
                try
                {
                        int c;
                        FileInputStream fin=new FileInputStream("kaus.txt");
                        FileOutputStream fout=new FileOutputStream("kaus.txt");
                        String s="Name:Kaustubh Wade";
                        byte b[]=s.getBytes();
                        fout.write(b);
                        fout.close();
                        c=0;
                        while((c=fin.read())!=-1)
                        {
                                System.out.print((char)c);
                        }
                        fin.close();
                }
                catch(Exception e)
                {
                        System.out.println(e);
                }
        }
}
```
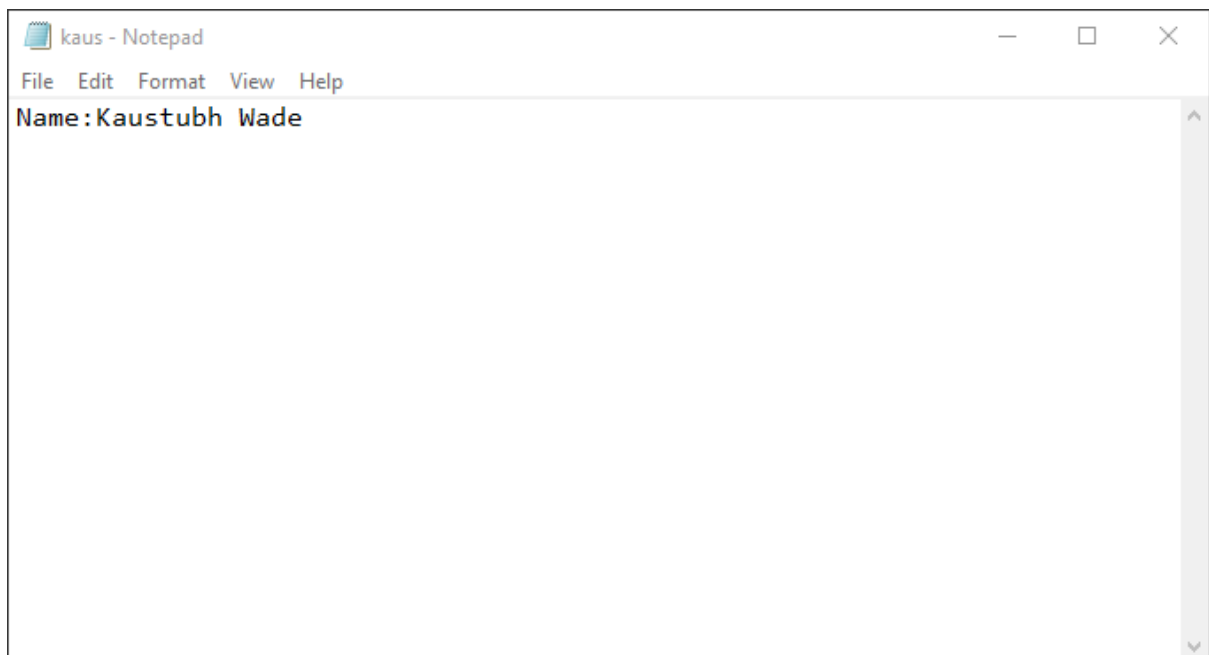

```
C:\Windows\System32\cmd.exe                                                    —    □    ×

C:\Users\shail\Desktop\IT Study Material\5S TY 1\OOPJ\Practicals\Prac>javac prac11_1.java
