Practical 11 Create an HTML page with JavaScript, which contains a button. When you click on the button it displays count on web page.

```html
<html>

<head>

        <title>

        </title>

        <script type="text/javascript">

                var a = 0;

                function Func()

                {

                        a = a + 1;

                        document.Form1.Temp.value = a;

                }

        </script>

</head>

<body align="center">

        <h3>Kaustubh Wade(160410116050)</h3>

        <br>    <br>    <br>

        <form name="Form1">

                <input type="button" value="Click Here" onclick="Func()"/>

                <br>    <br>

                Count : <input type="textbox" name="Temp">

        </form>

</body>

</html>
```
