Practical 12 Create an HTML page with JavaScript, which takes two numbers as inputs and display Odd numbers, Even Numbers on the Web page.

```html
<html>
<head>
        <title>Practical 12</title>
        <script type="text/javascript">
                function Func()
                {
                        var a =  document.Form1.Number1.value;
                        var b = document.Form1.Number2.value;
                        var Even = "";
                        var Odd = "";
                        for(i=a;i<=b;i++)
                        {
                                if(i%2==0)
                                        Even = Even + " " + i;
                                else
                                        Odd = Odd + " " + i;
                        }
                        document.Form1.Box1.value = Even;
                        document.Form1.Box2.value = Odd;
                }
        </script>
</head>
<body align="center">
        <h3>Kaustubh Wade(160410116050)</h3>
        <form name="Form1">
                <input type="text" name="Number1"/>
                <input type="text" name="Number2"/>
                <br>    <br>
```

```
            <input type="text" name="Box1" placeholder="Even"/>

            <input type="text" name="Box2" placeholder="Odd"/>

            <br>     <br>

            <input type="button" value="Submit" onclick="Func()"/>

      </form>

</body>

</html>
```
